

Recruitment Simulation - Sourcing & Screening Report

Section 1 - Objective

The objective of this project was to simulate an end-to-end recruitment sourcing and screening process for three startup companies Swiggy, Zepto, and Groww targeting HR and Talent Acquisition roles in Bangalore.

Section 2 - Roles Covered

1. Swiggy - HR Operations Associate

Key skills required: Excel, HRIS, Documentation, Onboarding, Communication

2. Zepto - Talent Acquisition Intern

Key skills required: LinkedIn Sourcing, Resume Screening, JD Writing, Coordination, Communication

3. Groww - HR Generalist Intern

Key skills required: MIS Reporting, HR Policies, Employee Engagement, Recruitment, Data Analysis

Section 3 - Sourcing Methodology

Candidates were sourced through three channels:

- LinkedIn: Used for senior and MBA HR profiles
- Naukri: Used for fresher and entry level profiles
- Referral: Used for profiles with specific skill matches

A total of 15 simulated candidate profiles were created across 3 companies with 5 candidates per role.

Section 4 - Key Findings

- Total Candidates Sourced: 15
- Total Shortlisted: 12
- Shortlisting Rate: 80%
- Top Performing Source: LinkedIn
- Highest Average Score: 4

- Most Competitive Role: Zepto TA Intern (highest number of strong profiles found)

Section 5 - Recommendations

1. LinkedIn should be the primary sourcing channel for MBA HR profiles as it yielded highest quality candidates
2. Naukri is more effective for fresher profiles and entry level HR roles
3. Referral channel should be used selectively for niche or senior roles requiring specific skill sets
4. Shortlisting threshold of 3.5 and above ensures only quality profiles move to interview stage
5. Role specific scoring rubrics improve consistency and reduce bias in the screening process
